Art Unit: 1761

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 1-6 are rejected under 35 U.S.C. 103(a) as being unpatentable over Nakajima (EP 0122400), Ebisawa et al, and Ninomiya et al (GB 1297741) in view of Ledniczky et al (WO 99/04822) and Rayburn (WO 00/12067) for the reasons set forth in rejecting the claims in the last Office action (Paper No. 6).

Nakajima discloses a sweetener composition comprising acesulfame K and an amino acid (see entire document).

Ebisawa et al disclose the crystallization of aspartame with amino acids (see entire document).

Ninomiya et al disclose the combination of saccharin and tryptophan (see entire document).

The claims differ as to the specific recitation of a salt.

Ledniczky et al disclose a salt of a sweetener where the salt provides beneficial organoleptic properties (see entire document).

Rayburn discloses a salt of saccharin for improved organoleptic properties (see entire document).

Art Unit: 1761

It would have been obvious to a person of ordinary skill in the art, at the time the invention was made, to produce a salt of any of the components of Nakajima, Ebisawa et al, and Ninomiya et al as taught by Ledniczky et al and Rayburn because the preparation of a salt of an intense sweetener improves the organoleptic properties of the sweetener.

Applicant's arguments filed January 7, 2003 have been fully considered but they are not persuasive.

Applicant argues that the claimed invention is a novel salt compound and not a mixture.

Nakajima, Ebisawa et al, and Ninomiya et al all teach the combination of sweeteners with an amino acid source. Ledniczky et al and Rayburn are specifically cited to teach that the salt of a sweetener improves organoleptic properties. It is noted that Applicant's comments directed to the validity of Rayburn are without factual support.

Applicant is using well-known components for their art-recognized function. It is not seen where Applicant has established anything other than expected results.

In the absence of unexpected results, it is not seen how the claimed invention differs from the teachings of the prior art. Applicant's claims are drawn to a combination of known components which produces expected results, see *In re Kerkhoven* 205 USPQ 1069 and *In re Gershon* 152 USPQ 602.

All of the claim limitations and arguments have been considered. None of them are seen as serving as basis for patentability.

No claim is allowed.

IN THE EVENT A FIRST RESPONSE IS FILED WITHIN TWO MONTHS OF THE MAILING DATE OF THIS FINAL ACTION AND THE ADVISORY ACTION IS NOT MAILED UNTIL AFTER THE END OF THE THREE-MONTH SHORTENED STATUTORY PERIOD, THEN THE SHORTENED STATUTORY PERIOD WILL EXPIRE ON THE DATE THE ADVISORY ACTION IS MAILED, AND ANY EXTENSION FEE PURSUANT TO 37 C.F.R. § 1.136(a) WILL BE CALCULATED FROM THE MAILING DATE OF THE ADVISORY ACTION. IN NO EVENT WILL THE STATUTORY PERIOD FOR RESPONSE EXPIRE LATER THAN SIX MONTHS FROM THE DATE OF THIS FINAL ACTION.
